

DON'T GET YOUR WIRES CROSSED

LET OUR CERTIFIED EXPERTS HANDLE YOUR WIRING & CABLE PROJECTS

In. Out. Done.

Project-Based IT Services Just Got Easier.

If your internal network needs connectivity with copper or fiber-optic cabling, **NetCenergy's** team of state-licensed telecommunications technicians can design-build-install your physical infrastructure. Our team works with your architect, contractor and/or building project manager to deliver outstanding quality at a competitive price. We handle wiring and cabling projects of varying scale and complexity.

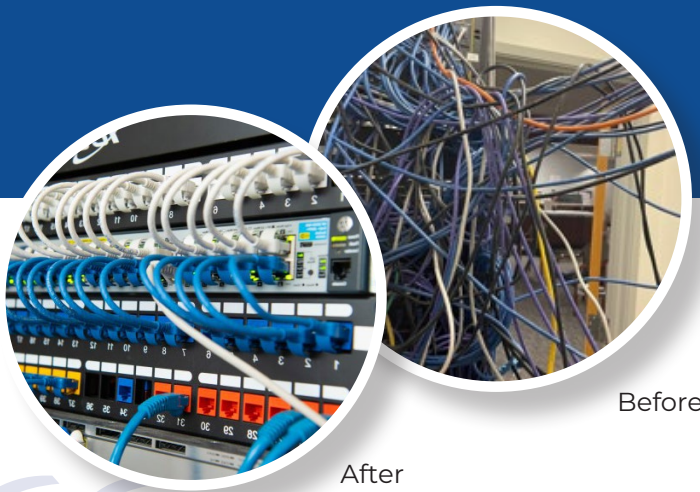

When you have a large expansion or building move, timing can be critical for delivering your new space when needed. Often, data cabling typically must be installed in phases as more of the project is built out. Our project management know-how has been a critical component in our success with infrastructure projects.

In some instances, our clients need a “closet clean-up” so that, in the event of a future IT problem, trouble-shooting becomes much more streamlined for a speedy resolution.

WHAT WE DO

- **Install wiring and/or new equipment for faster speed and improved productivity**
- **Outfit new spaces for moving or expansion of your organization, working closely with building contractors and architects to save time and money**
- **Reorganize and label your wiring closets — known as your main distribution center and your intermediate distribution location — using a proactive and efficient approach**

Before

After

WHAT OUR CLIENTS SAY

“During a period of high growth for the Hilb Group, we reached out to NetCenergy to assist us with three building projects in Rhode Island and Southeastern Massachusetts. Their team delivered each project with quality beyond our expectations...on time and on budget. They worked seamlessly with our project managers and we couldn't have asked for a more responsive, professional team.”

~ Rob Calise
National Practice Leader
Hilb Group

“NetCenergy is my go-to resource to update my wiring facilities in several locations for Brown Surgical. Their work dramatically improved our ability to troubleshoot any potential, future wiring-related issues. I make one call to NetCenergy, and they coordinate with the site to get the job done. Working with NetCenergy's infrastructure team is a very efficient process.”

~ Al Carvalho
Network Manager
Brown Surgical Associates

ABOUT US

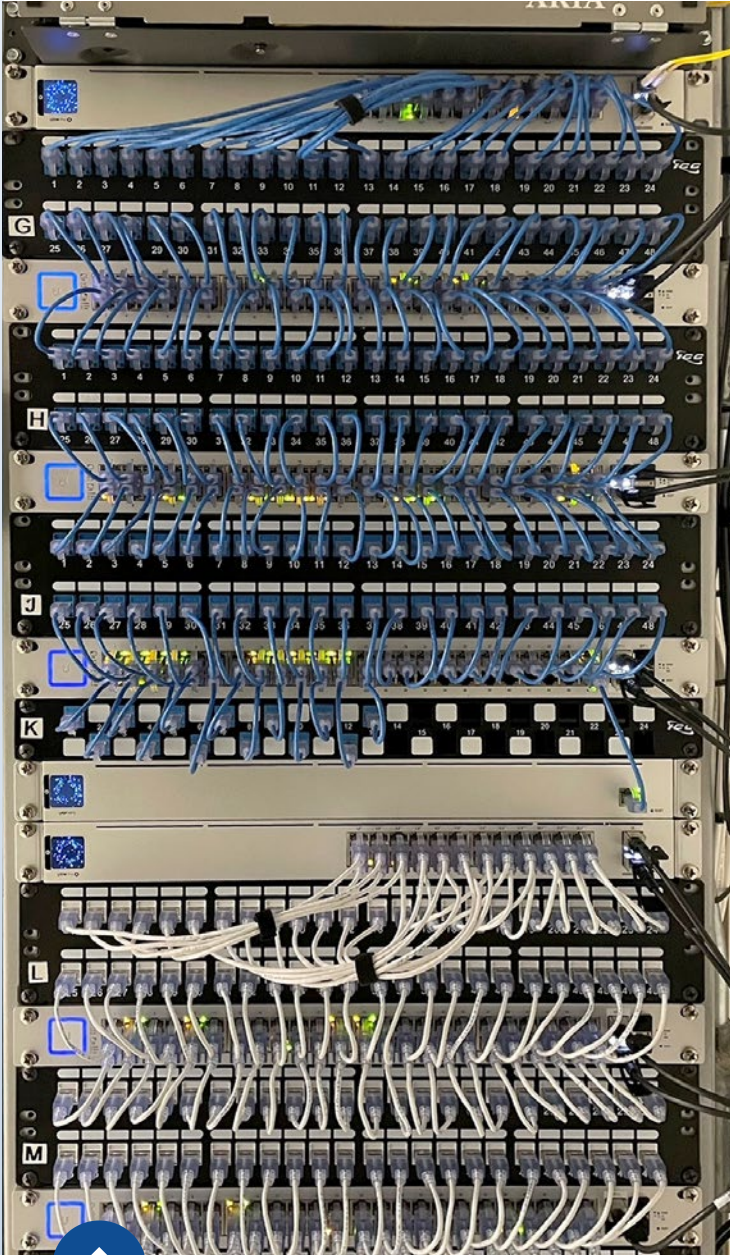

NetCenergy is an IT consulting firm specializing in complete managed services delivered through our unique **eNCompass** program. Our team of forward-thinking engineers is passionate about delivering practical IT solutions for small and mid-sized organizations that will make a significant, long-term impact on operations.

We have designed-built-installed hundreds of IT infrastructure systems tailored to our clients' specific needs and business demands. If your IT department could use an extra hand, **NetCenergy** offers hassle-free support and services on an as-needed, project basis.
